Zebra Tester	1
---------------------------	----------

Zebra Tester

Apica Zebra Tester is a scripting tool that offers a range of features to make your work easier. The scripts can be used for load testing and monitoring.

Applications

Zebra Tester for [Synthetic Monitoring](#)

ZebraTester for [Apica Load Test](#)

Executing Load Test Programs

After the load test program has been called by the Project Navigator, you must enter the test input parameters for the test run (a single execution of the load test program is also called “test run”).

Distributed Load Tests

Load tests can also be transmitted and started on **remote computers**. Similarly, a “single” load test can be divided up and run on several computers, in which case the load-releasing computers are combined into a “virtual” **application cluster**.

Recording Extension

The Zebra Tester Extension provides a Browser toolbar object and menu which you can use to control recording of web surfing sessions in your browser.
